

Home. SPA. Home.

Sofa. Sauna. Sofa.

**Sauna
Sofa**

Sauna reinvented

What if the sauna could leave its hidden existence in the basement behind and become an integral part of the living area? And all that with a dual function as a stylish piece of furniture? We asked ourselves that, too - and completely rethought this topic.

The result: a relaxation and wellness oasis in the living area that completely transforms into a sofa after use. Designed so smartly that it can fit in every apartment.

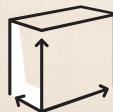

Design: Gilbert Geister

Simple. Versatile.

The transformation from sofa to sauna takes place in just a few simple steps: the seat cushion is removed and can be used as a lounger. Below it you find the electric sauna heater. The backrest is flipped upwards, the side walls and glass fronts are folded forward. Done.

The resulting interior is designed flexibly thanks to the height-adjustable lounger and bench. The generous floor space and interior height offer the opportunity to use the sauna while sitting or lying down.

Sofa dimensions (W, D, H): 196 cm, 110 cm, 153 cm
Sauna dimensions (W, D, H): 196 cm, 110 cm, 175 cm
Glass thickness: 8 mm with magnetic sealing
Weight: ca. 190 kg (plus heater and cushioning)

Textile Colors

Highly durable and water & dirt repellent:
The heavy flat-woven material with a linen look
is characterized by its high durability.

All covers are removable
and washable at 30°.

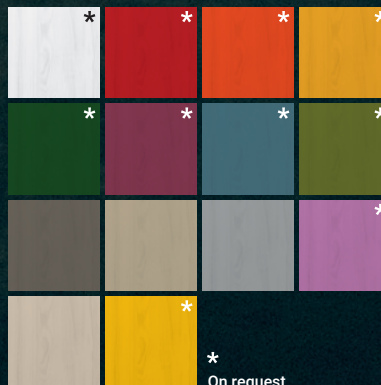

Other Colors on request

Wooden Decor

Exterior: Multiplex, coated with transparent melamine film
Interior cladding: untreated spruce or untreated aspen
Sauna benches: Abachi

Made in Germany

No compromises, not even in production: With over 30 years of practical experience in the field of individual sauna production, our team has gained enormous expertise. We manufacture 100% in Germany, which not only meets our quality standards, but also allows for short transport routes.

Sustainability

Not only the production in Germany, but also the materials used, the low power consumption as well as the optimized construction ensure a high level of sustainability.

And of course, the total amount of material used is significantly lower because you are purchasing two pieces of furniture in one.

- renewable raw materials wood and hemp insulation
- 100% recyclable glass
- optimized for low power consumption (only 3.6 kWh) due to plug&play infusion heater with 230 V socket connection
- low air volume thanks to the optimized arrangement of the interior
- most of the residual heat remains in the living area after a sauna session
- good insulation for quick heating
- operation in an already heated room

For comparison:

Showering for eleven minutes uses 176 liters of water and 6.1 kWh of energy.

Source: Bund der Energieverbraucher e.V. This calculation includes a shower head with a flow of 16 liters per minute, a cold water temperature of 10 °C and a shower water temperature of 40 °C.

We only use wood from
controlled forestry.
